

Error-messages

The version of the virtual disk is newer than the version supported by this program

When you try to start a VM a message is displayed and the VM will not start

The version of the virtual disk is newer than the version supported by this program

Platform : any

Anamnese

Older VMware versions do not understand this new parameters used with virtual Hardware type 7:

encoding=
isNativeSnapshot=
ddb.uuid =
ddb.longContentID =

It may be necessary to downgrade the version of a vmdk so that it can be used on older platforms - or older mount tools.

In this cases first remove the 4 listed parameters.

If that is not enough also change the

[ddb.virtualHWVersion =](#)

Most probably you want to go down from 7 to 6 or 4.

Changing this does NOT damage the vmdk - it can be changed back at any time later.
