

usage

Cheatcodes - explanation of the different functions

the following cheatcodes can be used with MOA 2.4.1 or higher

the left collumn lists the cheatcode - the right collumn explains what happens

cheatcode	action
reboot	reboot now
shutdown	shutdown now
cmd	open a cmd - back to prompt when exit
shell	run diskmanagement, regedit and cmd - back to prompt when done
regedit	open regedit - back to prompt when done
help	display helptext - back to prompt when done
create ramfile	creates a ramfile - back to prompt when done
ramfile	mounts a vmdk and goes to stage2
tc	mounts a truecrypt-container and goes to stage2
disk	opens diskmanagement and expects that you mount a partition to R: then goes to stage 2
minimal	creates a ramdisk and sets the size to 16 Mb and goes to stage2
mini	creates a ramdisk and sets the size to 32 mb and goes to stage2
safe	creates a ramdisk and sets the size to 64 mb and goes to stage2
tiny	creates a ramdisk and sets the size to RAM / 5 and goes to stage2
lean	creates a ramdisk and sets the size to

usage

	RAM / 4 and goes to stage2
big	creates a ramdisk and sets the size to RAM /3 and goes to stage2
splendid	creates a ramdisk and sets the size to RAM / 2 and goes to stage2
remount	automated use of cheatcode disk - do not use manually
tc_auto	automated use of cheatcode tc - do not use manually
vmdk_auto	automated use of cheatcode ramfile - do not use manually
