

Installation

How do I install VMplayer 3 silently without reboot ?

Silent installation of VMplayer 3

in earlier versions you could use the setup.exe with parameters - that no longer works.

Now you first have to extract the msi-file.

Extract the setup executable like this

```
VMware-player-3.0.0-203739.exe /e .\vmplayer3
```

then call the msi like this

```
msiexec /i "vmware player.msi" /qr /norestart
```
