

# Troubleshooting

## Can't install any guest from CD ...

first of all - do not use "autodetect" - specify the driveletter or device directly.  
This can be done via the GUI or by editing the vmx-file.

on Linux use - adjust to your needs

```
ide1:0.filename = "/dev/hdc"
```

on Windows use - adjust to your needs

```
ide1:0.filename = "E:"
```

if it still does not work change

```
ide1:0.deviceType = "cdrom-raw"
```

to

```
ide1:0.deviceType = "atapi-cdrom"
```

(this is the same as using "legacy emulation)

if it still does not work try to use an ISO-file instead - use

```
ide1:0.present = "true"
```

```
ide1:0.deviceType = "cdrom-image"
```

```
ide1:0.filename = "myiso.iso"
```

```
ide1:0.startConnected = "TRUE"
```

if it still does not work use Daemon-tools or similar CD-emulators on a Windows-host and assign appropriate driveletter like this

- replace E: with the driveletter of the Daemon-tools-drive

```
ide1:0.present = "true"
```

```
ide1:0.deviceType = "cdrom-raw"
```

```
ide1:0.filename = "E:"
```

```
ide1:0.startConnected = "TRUE"
```
